

JOHNS HOPKINS
MEDICINE

Opportunity for epilepsy patients with uncontrolled tonic-clonic seizures (convulsions)

TRACK  **VIEW**  **SHARE**

Johns Hopkins **EpiWatch™** is an Apple Watch™ app and research study. Downloading EpiWatch on Apple Watch and iPhone® helps you to manage your epilepsy by tracking your medications, seizures, and possible triggers or side effects. You can view this information at any time, and a dashboard allows you to show a summary of the data with your doctor or caregiver, if you want. With EpiWatch, you can also send a message to family members or caregivers to let them know when you are tracking a seizure.

EpiWatch will share the data you enter into the app with Johns Hopkins researchers to help them better understand epilepsy and potentially improve treatment, as well as evaluate if a future app could potentially detect seizures.

Who's Eligible?

- Own an Apple Watch that is paired with an iPhone (both must be running the latest iOS version)
- Age 16 years and older; have epilepsy and having had at least one seizure in the past year
- Not have a major learning or physical disabilities that would impair your ability to interact with the app while participating in this study. (Family members and caregiver may help you carry out some of the activities of the study)

Watch Donation Program

Collaborating with Citizens United for Research in Epilepsy (CURE), Johns Hopkins EpiWatch research team would like to donate free-of-cost watches to participants who meet the study eligibility criteria.

**Call (443) 287-3042 to find
out if you are eligible.**
